DETAILED ACTION

Allowable Subject Matter

Claims 16-30 and 32-41 are allowed. The following is an examiner's statement of reasons for allowance:

In regards to Claim 16, the prior art does not directly disclose of a semiconductor device comprising a plurality of IC elements including at least an input stage IC element and an output stage IC element and mounted on a common mounting substrate/board, and signal transmission paths that connect each two of the plurality of IC elements to achieve impedance matching there between wherein that an input impedance of the input stage IC element and an output impedance of the output stage IC element are equal to a first impedance and each of at least two of the plurality of IC elements are impedance matched to a corresponding one of the signal transmission paths at a matching impedance, *which is higher than the first impedance*, nor would it have been obvious to one of ordinary skill in the art to do so. Specifically the prior art does not disclose of the matching impedance being greater than a first impedance related to input and output circuit/element/stages. Therefore, Claims 17-28 are also allowed by default as being dependent on the allowable Claim 16.

In regards to Claim 29, the prior art does not directly disclose of a semiconductor device comprising a plurality of IC elements including at least an input stage IC element and an output stage IC element and mounted on a common mounting substrate/board, and signal transmission paths that connect each adjacent two of the plurality of IC elements to achieve impedance matching there between wherein an input impedance of

the input stage IC element and an output impedance of the output stage IC element are a first impedance and a second impedance respectively and each of at least two of the plurality of IC elements is impedance matched to a corresponding one of the signal transmission paths at a *matching impedance higher than a lower one of the first and second impedances wherein matching impedance differs between two of the signal transmission paths*, nor would it have been obvious to one of ordinary skill in the art to do so. Specifically the prior art does not disclose of the matching impedance being higher than a lower impedance of either the input or output impedance as related to input and output circuit/element/stages. Therefore, Claims 30 and 32-41 are also allowed by default as being dependent on the allowable Claim 29.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
